DBG-MPSoC WIKI

Definition

A Debugger on Chip (DBG) is a Hardware-Software System that is used to test and debug Hardware Description Languages. The code to be examined is running on a simulator, a technique that allows great power in its ability to halt when specific conditions are encountered. When a hardware description crashes, debuggers show the position of the error in the target description.

Open Source Tools

Verilator

Hardware Description Language SystemVerilog Simulator

```
git clone http://git.veripool.org/git/verilator
```

```
cd verilator
autoconf
./configure
make
sudo make install
```

```
cd sim/verilog/regression/wb/vtor
source SIMULATE-IT
```

```
cd sim/verilog/regression/ahb3/vtor
source SIMULATE-IT
